## SUMMARY

Analytical and problem-solving Computer Science Engineering student (Final year) with hands-on experience as a Python Programmer Intern. Adept at data exploration, statistical analysis, and building predictive machine learning models to support data-driven decision-making. Highly proficient in Python, SQL, and Power BI for extracting, cleaning, and visualizing complex datasets. Equipped with foundational knowledge in data pipelines and cloud analytics, eager to drive continuous improvement and predictive quality initiatives in manufacturing and operations environments.

## SKILLS

- **Data Analytics & Visualisation:** Power BI, Advanced Excel, Statistical Analysis, Data Exploration, Dashboarding, Trend Studies.
- **Programming & Databases:** Python, SQL, Data Extraction & Manipulation, Database Optimization, HTML5, JavaScript.
- **Machine Learning & Engineering:** Predictive Modeling, Anomaly Detection basics, ETL/ELT concepts, Data Pipelines, Deep Learning (GPU-accelerated).
- **Tools, Cloud & Automation:** AWS (EC2, S3, VPC), Git, GitHub, REST APIs, Automation workflows, Stakeholder Communication, Documentation.

## EXPERIENCE

### Python Programmer Intern | Arnita InfoTech

May 2026 - Present

- Collected, cleaned, and analyzed datasets to design dynamic corporate Sales Dashboards using Power BI and Advanced Excel, presenting clear, actionable insights to non-technical stakeholders.
- Engineered a production-ready Python application, building basic data pipelines and automating workflows to optimize cross-functional business operations and improve overall efficiency.
- Facilitated discovery sessions to understand data needs, documenting processes to convert business requirements into functional analytical solutions.

## PROJECTS

### AI Movie Recommendation System | HTML , CSS , JS , Python , API , Github

- Developed an AI-based movie recommendation system using content-based recommendation techniques. Implemented recommendation algorithms based on user preferences and similarity analysis.

### Predictive AQI Modeling System | Python, Machine Learning, Statistical Analysis

- Built predictive analytical models using Python to forecast the Air Quality Index (AQI), leveraging statistical methods to identify patterns within complex, large-scale environmental datasets.

### Interactive Data Portfolio Platform | HTML5, API Integrations, Data Pipelines

- Developed a serverless web application incorporating basic ETL concepts by integrating the Google Sheets API for automated data extraction and zero-cost backend storage.

### Enterprise Banking Application | Python, SQL Fundamentals

- Developed a secure financial application focusing on strict data integrity, structured data manipulation, and optimized transaction processing workflows.

## EDUCATION

### Bachelor of Technology - Computer Science Engineering & Software Engineering

Jul 2023 - May 2027

Ajeenkya D Y Patil University, Pune

## CERTIFICATIONS & ACHIEVEMENTS

- **Tata Data Visualisation Simulation (Forage):** Created executive-level visual reports and analytical summaries for Tata Consultancy Services to support strategic decision-making.
- **AWS re/Start Graduate:** Completed bootcamp covering cloud analytics infrastructure, databases, and core AWS services.
- **IBM Developer Skills Network:** Accelerating Deep Learning with GPUs (Predictive Analytics).

**Smart India Hackathon 2025:** Selected participant for university internal validation round.
